THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. **PROSECUTION ON THE MERITS IS CLOSED.** THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN **THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE** OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. **THIS STATUTORY PERIOD CANNOT BE EXTENDED.** SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given by Mr. Aaron Deditch during a telephone interview on May 14, 2009.

The application has been amended as follows:

In the specification:

Page 1, line 1, insert "This application is a 371 of PCT/DE04/00305, filed on February 19, 2004."

Replace Claim 21 with the following:

-- 21. (Currently Amended) A device for determining at least one calibration parameter of at least one image sensor, comprising:

the at least one image sensor, which is configured to monitor a scene of a passenger compartment of a motor vehicle in which at least a portion of the scene remains static over time; and

at least one processing unit configured to detect a decalibration of the at least one image sensor in the operation of the at least one image sensor, as a function of

image signals, and to, upon detecting the decalibration, at least one of report the decalibration to at least one of a subsequent system and the driver, and determine the at least one calibration parameter as a function of the image signals;

wherein the at least one image sensor derives the image signals at least from at least one invariant pattern in an image coverage range of the at least one image sensor,

wherein the at least one invariant pattern is formed by at least one reference object applied in the scene for determining the at least one calibration parameter, and wherein the at least one reference object is applied to at least one object of the scene that is relevant with respect to a monitoring function of the at least one image sensor,

wherein the at least one reference object is applied to at least one of at least one air bag flap, at least one air bag, and at least one steering wheel in the passenger compartment of the motor vehicle. --

Cancel Claim 25.

Replace Claim 27 with the following:

27. (Currently Amended) A method for determining at least one calibration parameter of at least one image sensor monitoring a scene of a passenger compartment of a motor vehicle in which at least a portion of the scene remains static over time, the method comprising:

detecting a decalibration of the at least one image sensor during the operation of the at least one image sensor as a function of image signals;

upon the detection of the decalibration, at least one of reporting the decalibration to at least one of a subsequent system and the driver, and determining the at least one calibration parameter as a function of the image signals; and

deriving the image signals from at least one invariant pattern in the image coverage range of the at least one image sensor by the at least one image sensor;

wherein the image signals are at least one of derived from at least one reference object applied in the scene for the determination of at least one calibration parameter, and derived at least from at least one naturally occurring object of the scene, the at least one reference object at least one of being an illuminating arrangement and having a high reflectivity, and

wherein the image signals are derived from at least one reference object, the at least one reference object being applied to an object of the scene that is relevant with respect to the monitoring function of the at least one image sensor, wherein the at least one reference object is applied to at least one of at least one air bag flap, at least one air bag, and at least one steering wheel in the passenger compartment of the motor vehicle. --

Cancel Claim 29.

Replace Claim 30 with the following:

-- 30. (Currently Amended) A computer readable medium having a computer program which is executable by a computer processor, comprising:

a computer program arrangement having computer program code for determining at least one calibration parameter of at least one image sensor monitoring a scene of a passenger compartment of a motor vehicle in which at least a portion of the scene remains static over time, by performing the following:

detecting a decalibration of the at least one image sensor during the operation of the at least one image sensor as a function of image signals;

upon the detection of the decalibration, at least one of reporting the decalibration to at least one of a subsequent system and the driver, and determining the at least one calibration parameter as a function of the image signals; and

deriving the image signals from at least one invariant pattern in the image coverage range of the at least one image sensor by the at least one image sensor;

wherein the at least one invariant pattern is formed by at least one reference object pplied in the scene for determining the at least one calibration parameter, and

wherein the at least one reference object is applied to at least one object of the scene that is relevant with respect to a monitoring function of the at least one image sensor, wherein the at least one reference object is applied to at least one of at least one air bag flap, at least one air bag, and at least one steering wheel in the passenger compartment of the motor vehicle. --

Cancel Claim 31.

Reasons For Allowance

The combination as claimed wherein a device for determining at least one calibration parameter of at least one image sensor comprising the at least one reference object is applied to at least one object of the scene that is relevant with respect to a monitoring function of the at least one image sensor, wherein the at least one reference object is applied to at least one of at least one air bag flap, at least one air bag, and at least one steering wheel in the passenger compartment of the motor vehicle (claims 21, 27, 30) is not disclosed, suggested, or made obvious by the prior art of record.

Langmeier et al. (US 2002/0016692) discloses a method for implementation in a measuring system containing a sensor and an arithmetic unit for detection of a defect in the measuring system, wherein at least one state variable of the system is derived from at least one sensor value in the measuring system and a cost function value based on deviation of the measured value y from the calibration as a function of a previously calculated state x is calculated (Abstract). However, Langmeier et al. does not disclose at least determining a calibration parameter as a function of the image signals formed by at least one reference object applied to the scene.
